

OSHA #7400 NOISE IN CONSTRUCTION

TOPICS INCLUDE:

At the end of the course, the participants will be able to:

- OSHA's Noise Standard
- Selection and use of hearing protection
- Conducting sound level surveys
- Worker Training
- Understand the properties of sound and its relationship to noise-induced hearing loss
- How to conduct sound level surveys and the requirements for training workers.

This course covers the evaluation and reduction of noise hazards in the construction industry. Course topics include OSHA Construction Noise Standards, properties of sound, noise-induced hearing loss, noise exposure control, selection and use of hearing protection, conducting sound level surveys, and worker training. Classroom demonstrations of noise instrumentation and hearing protection devices are featured. The target audience is the construction employer or representative designated with the responsibility to develop a construction noise program. Upon course completion students will understand the properties of sound and its relationship to noise-induced hearing loss, hearing protection usage, how to conduct sound level surveys and the requirements for training workers.

VILT courses require live attendance. Device requirements can be found at: <https://www.oshamidatlantic.org/virtual-instructor-led-training/>
